TRM C-45	Contech Const. Prod.

Method of Documentation of Acceptance: By brand and manufacturer.

Method of Approval for Materials to be added to this Qualified Products List:

1. The erosion control matting is matting of a natural or synthetic woven material or a natural or synthetic nonwoven material. The materials shall be held together either with netting, fused together, and/or adhesively bonded together to form a mat.

2. The following are requirements for erosion control matting:

(a) Class 1 Matting. Class 1 matting acts to promote seed germination and control erosion on slopes of 3:1 or flatter under all soil conditions. In general, this class of matting includes natural, synthetic, or synthetic and natural matting; wood fiber mulches (applied at a minimum of 3.4 mton/hectare, 1.5 tons/acre, with a tackifier); and heavily applied straw mulch (minimum of 9 mton/hectare, 4 tons/acre, with a tackifier). The biodegradable life (include UV stable) of the matting shall be a minimum of 6 months.

(b) Class 2 Matting. Class 2 matting acts to control erosion as a liner for channels and ditches and on slopes of 2:1 or flatter under all soil conditions. In general, this class of matting includes woven matting made of natural, synthetic, or synthetic and natural materials. The biodegradable life (include UV stable) of the matting shall be a minimum of 12 months.

(c) Class 3 Matting. Class 3 matting acts to control erosion as a liner for channels and ditches. This class is for use in areas of high susceptibility to erosion. Class 3 matting shall have a biodegradable (include UV stable) life of 5 years and the matting shall be able to withstand minimum limiting shear stresses of .096 kN/m² (2.0 lbs/ft²) over bare soil for 50 hours.
